

Forking in Git

Fork

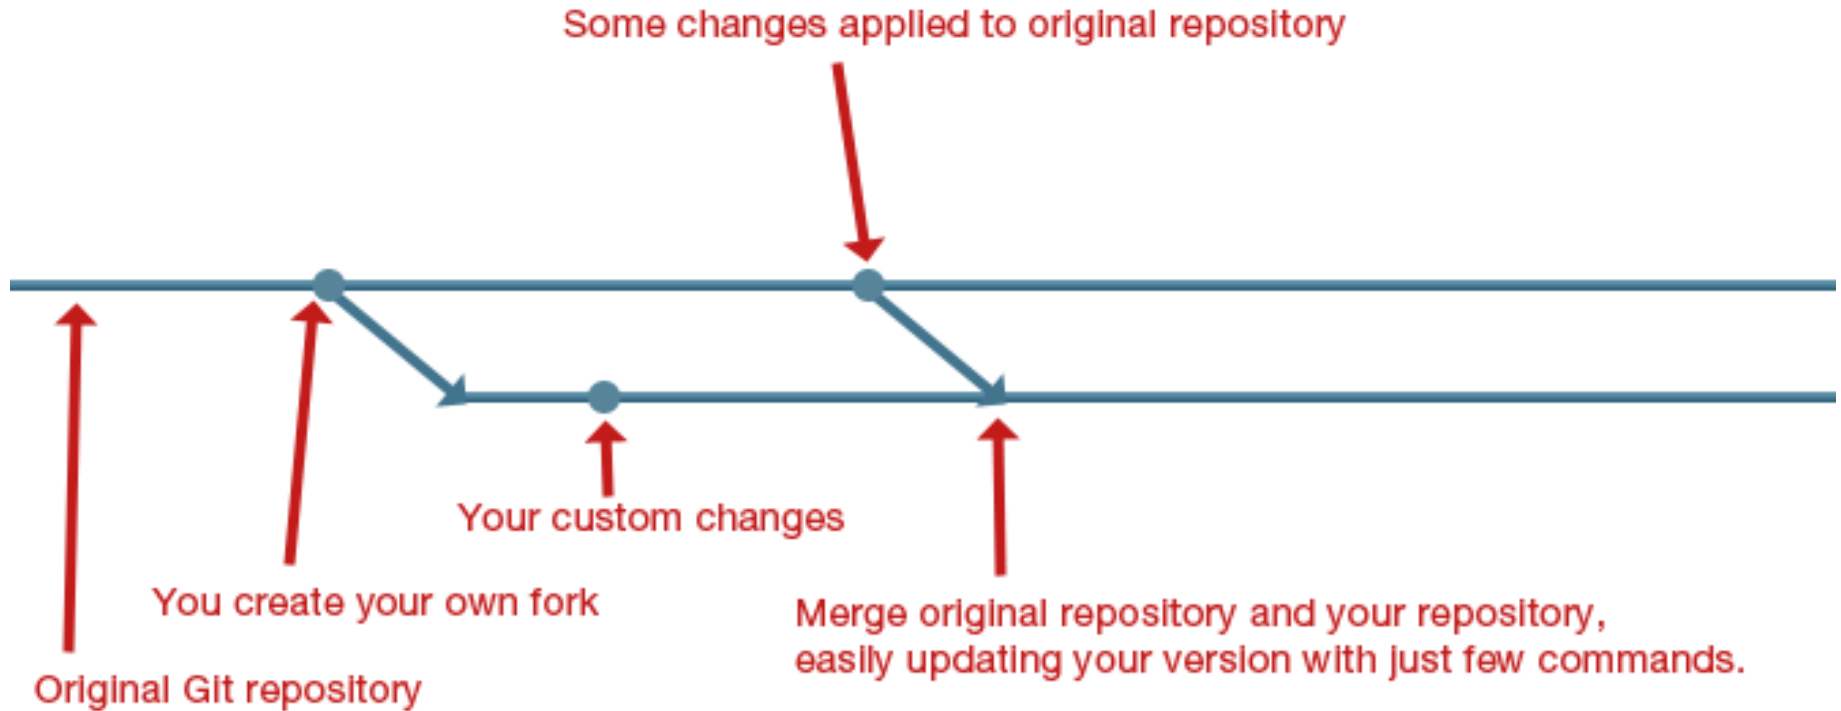

A fork is a copy of a repository

Forking a repository allows you to freely experiment with changes without affecting the original project

(Please get mind out of gutter)

Forking

Fork, then Clone

Fork lab 1 at: <https://github.com/sgtech-ict2105/ict2105-lab01-2020>

Ensure you fork to get your own repo, don't simply clone the original!1!!!!

Find the URL of your forked repo (likely to be the following)

<https://github.com/<youruserid>/ict2105-lab01-2020>

Go to your github directory and then clone! (Or use Android Studio)

```
git clone https://github.com/<youruserid>/ict2105-lab01-2020
```
